—	Design directions for the rebuild	22
06	Roadmap: 30 / 60 / 90 days	27
A	Appendix: method, needs from Otto, sources, evidence index	29

What this report covers

An audit of ottooptics.io as it was served on 14 October 2026: what search engines and AI crawlers receive, how fast the site is on phones, how the brand shows up in search, and how the site converts. It ends with three design directions for the rebuild and a 90-day plan.

How to read it

- **Every number has a source.** The small grey source line names a public URL or a numbered evidence item, [E1] to [E14], described in the appendix with what it contains and when it was captured. Everything was captured or accessed on **14 October 2026** unless a line says otherwise. The appendix also lists every URL.
- **Severity**: Critical blocks search visibility or trust now; High costs leads or rankings; Medium is worth fixing in the rebuild; Low is polish.
- [inference] marks our reading of the evidence, not an observed fact. unverified (search summary) marks a figure seen only in a search-tool summary, not on the source page.
- **Limits.** Lighthouse was run twice, once in the audit (12.8.2) and once in our re-check (12.2.1), with one run per URL each time. Both values are shown as a range rather than averaged, and mobile scores are directional. Search results are a US-only sample from one search tool, not a rank tracker. Details in the appendix.

Three decisions for Otto

1. **Buyer and direction:** which clinic buyer leads, and so which design direction (A, B or C).
2. **Rebuild scope and owner:** what the rebuild covers and who builds and runs it.
3. **Evidence and approval owner at Otto:** who supplies and signs off statistics, security, privacy and legal facts.

The short version

The site looks better than most optical-software vendors, and its desktop speed is good (Lighthouse Performance 93 and 97 in two single runs). Underneath, page copy and blog text are absent from the initial HTML, so non-rendering crawlers cannot read them (Google indexing needs Search Console verification); in our sample the brand name did not reliably return Otto's site; and several public facts need clarifying and dating. All are fixable in a rebuild, on a timeline set by the agreed scope and Otto's inputs.

Source: [E2] (home-d); [E1]; [E9]

01

Executive summary

01 · EXECUTIVE SUMMARY

Twelve issues, ranked by impact

Ranked by our judgement of likely impact on visibility, conversion and trust [inference], weighted by how many pages each touches. Visibility: 1–4, 11. Conversion: 6–8, 10. Trust: 5, 9, 12. Issues 1–3 share one root cause: the site is assembled in the browser, so the initial HTML carries templates.

1 Blog article text is absent from the initial HTML Critical

Evidence. All four posts in the sitemap serve byte-identical server HTML with the generic title "Otto Blog — Smarter eye care, shared", a canonical pointing at `/blog.html`, two H1s (`{{ title }}` and a hidden "Post not found"), and none of the article text. Unknown slugs return HTTP 200; re-measured with curl on 14 Oct 2026, `?slug=does-not-exist` still returns 200. Non-rendering crawlers cannot read the articles; whether Google indexes them, and which canonical it selects, needs Search Console verification. Source: [E6] §1.2–1.3; [E1] SEO-3; [E8]

Fix. Generate static `/blog/<slug>/` pages with their own title, description, canonical, OG and JSON-LD; 301 the old URLs; return 404 for unknown slugs.

2 Every page ships unfilled template placeholders Critical

Evidence. 120 `{{ }}` placeholders across 11 pages of server HTML, 28 on /contact and 19 on home. The home H1 is `{{ heroPre }}<br>{{ rotatingChip }}<br>{{ heroPost }}` ; /product's is `{{ pHeroTitle }}` . Rendering depends on a client runtime that loads React 18.3.1 from unpkg.com. Source: [E4] (grep count); [E1] SEO-4

Fix. Pre-render at build time (static generation) so the HTML carries the real copy; bundle or drop React.

3 Canonicals contradict the sitemap, and every page exists twice Critical

Evidence. 10 of the 13 sitemap URLs carry a canonical to a different `.html` URL. Every page also answers at `/x.html` with HTTP 200; re-measured, `/product.html` and `/product` both return 200 with the same ETag. This is a configuration finding; the canonical Google actually selects needs Search Console verification. Source: [E1] SEO-1, SEO-2; [E8]

Fix. Make the extensionless URL canonical in the canonical tag, og:url, sitemap and internal links; 301 every `*.html` .

4 Otto's site is often not returned for its own brand name High

Evidence. In a sampled US search, ottooptics.io was not returned for 3 of 4 brand queries ("Otto Optics", "ottooptics", "Otto Optical Systems"). A third-party review page on trustburn.com appeared for all 4 brand queries, second or third on three of them. Unrelated "Otto" companies fill the rest. For 8 category queries, the main domain was not returned for any; Otto was returned only through help articles on know.ottooptics.io (2 of 8). Source: [E9] §A–B (sampled SERP, not a rank tracker)

Fix. One consistent entity (name, founding date, HQ) on the site and every profile; Organization `sameAs` to the real profiles; claim G2 and Capterra; check whether Otto qualifies for a Google Business Profile through in-person customer contact, and create or verify one only if eligible; a press page linking existing coverage.

5 Public facts to clarify and date High

Evidence. Sources give 2019, 2020 and 2021 as founding milestones without saying what each marks (founding, incorporation or launch); clinic counts of 200+, 650+ and 800+ appear without dates; sales lift is "32%" on home and "38%" in a blog post, and setup is "30 minutes" on home and a "20-minute setup plan" on /contact, without saying whether these describe the same activity, cohort and period. Source: [E9] §C; [E5] home, why-otto, contact, blog post

Fix. Otto confirms what each figure describes. Then one stats file with a source, cohort and "as of" date for each figure, rendered everywhere from that file. Then update LinkedIn, Wellfound and Crunchbase to match.

6 Third-party scripts hold back mobile High

Evidence. Third-party code is 91% of what mobile home downloads (1,117 of 1,222 KiB), and it loads before consent. HubSpot blocked the main thread on mobile home for 700 ms in the audit run and 1,063 ms in our re-run. Mobile Performance was 46–70 across both runs, against 93–97 for desktop home. These are single runs, so treat them as directional. Source: [E2], [E1] PERF-1; [E6] §1.6, §2

Fix. Load optional tracking (the ads tag, analytics) only after consent; defer eligible widgets such as HubSpot chat further, until requested; remove the runtime React download.

01 · EXECUTIVE SUMMARY, CONTINUED

7 The main call-to-action button fails contrast on every page High

Evidence. White text on brand cyan #18BFF7 measures 2.13:1 ("Get started", "Book a Demo"); WCAG AA needs 4.5:1 for normal text. Lighthouse's color-contrast audit fails on every run. Source: [E1] A11Y-1

Fix. Use the CTA blue #0077B6 with white text (4.87:1) for buttons; keep cyan for shapes and ink-on-cyan accents. Source: [E14] colour tokens

8 The cookie banner covers about 27% of the mobile screen High

Evidence. The default HubSpot banner hides the CTAs on every mobile fold, is the Largest Contentful Paint element on mobile home, and its Accept button is 2.22:1. Lighthouse also recorded nine third-party cookie entries on initial load, before any consent choice; their purpose and consent behaviour should be confirmed with a clean-profile trace. Source: [E1] MOB-1, PERF-3, TRUST-5

Fix. A one-line, on-brand consent bar; optional tracking loads only after consent.

9 Limited public detail on security and AI data handling High

Evidence. Otto does publish safeguards: the privacy policy describes "physical, electronic, and administrative measures", firewalls and SSL encryption, and /copilot says clinic data "is not retained or used to train AI models". Beyond that, 0 mentions of PIPEDA, PHIPA, HIPAA, SOC 2, data residency or hosting location across 15 rendered pages. The policy says "Last modified: May 27, 2022", before Copilot (AI) and Eye Drop Ship launched, so it warrants review. Otto handles prescriptions and patient contacts. Source: [E1] TRUST-1, TRUST-2

Fix. Ask Otto for supporting detail and reconfirmation of the existing statements, then a /security page and a fuller Copilot data-use statement, written only from facts Otto supplies (see "Needs from Otto").

10 The About page weighs almost 10 MB High

Evidence. Lighthouse total byte weight was 10,064,726 B in the audit and 10,056,370 B in our re-run. The six team photos total 8,861,332 B (re-measured with curl), and one PNG is 3,846,031 B at 1136×1785 for a small card. Mobile LCP was 3.4 s in the audit and 6.3 s in the re-run. Source: [E2], [E1] PERF-2; [E6] §1.7, §2

Fix. Resize to about 600 px wide WebP or AVIF; the existing `founder-alex.webp` (29,900 B) is the model.

11 Old URLs and the www host are not redirected Medium

Evidence. `www.ottooptics.io/about-us` was still in search results and returns 404. Re-measured: only the www root redirects (301 to the apex); `www…/pricing`, `www…/product` and `www…/about-us` all return 404 from a non-Netlify server, and HEAD on www returns 405. The sitemap omits /copilot, /eye-drop-ship and the newest post. Source: [E9] §A; [E8]; [E1] SEO-5

Fix. 301 every www path to the same apex path; 301 `/about-us` to `/about`; generate the sitemap from the routes.

12 Positioning leans on claims a competitor already makes Medium

Evidence. Alcon's MARLO offers practice branding and multi-manufacturer ordering at Free / US$24.95 / US$49.95 per month per door. Otto's plans are CA$197.10 and CA$287.10 per month, billed yearly. Otto's AI Copilot (launched August 2026) did not appear in the sampled AI-assistant query. Source: home.meetmarlo.com/pricing via [E11]; [E5] pricing; [E9] §B

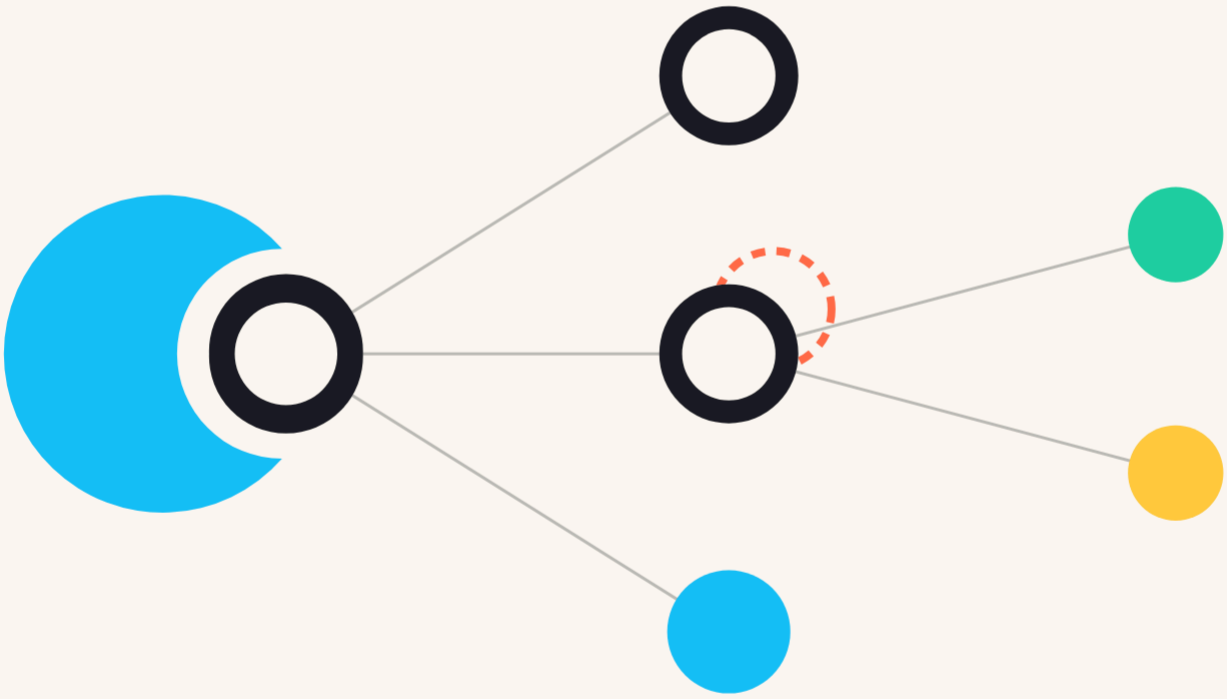

Fix. Drop "your brand, every supplier" as a unique claim. Lead with verified specifics: Eye Drop Ship, lens quotes, competitor price watch, multi-supplier accounts, Copilot.

What is already working

A clear value proposition and a modern, consistent visual identity; desktop home Lighthouse Performance 93 and 97 in two single runs, with LCP 1.1–1.4 s; 0 console errors and 0 failed requests across 27 URLs on two devices; no horizontal overflow; HTTPS with HSTS; http→https redirects; public pricing; an interactive demo and a video walkthrough; dedicated Copilot and Eye Drop Ship pages. Source: [E2] (home-d); [E6] §2; [E1] "Strengths"; [E8]

02

Technical SEO

02 · TECHNICAL SEO

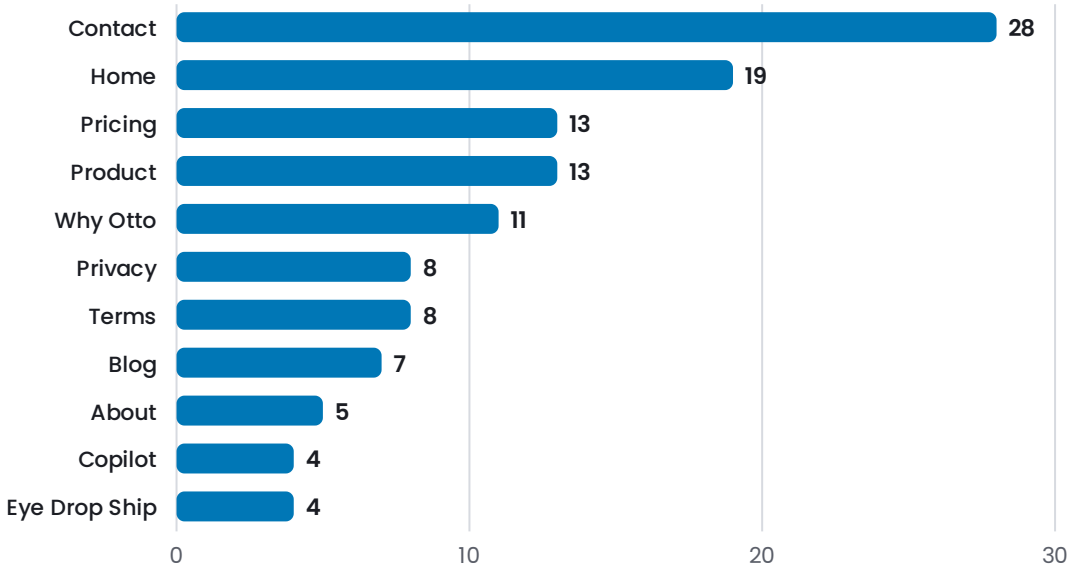

The initial HTML carries templates, not copy

Lighthouse gives every page an SEO score of 100, in both runs. That score is misleading here: Lighthouse runs JavaScript and checks only basics. A crawler that reads the server HTML, as social previews, AI crawlers and some search crawlers do, sees placeholders.

2.1 Template placeholders in the server HTML

Unfilled {{ }} placeholders per page

Count in the HTML returned by the server, before JavaScript runs. 120 in total.

Source: [E4] (curl, captured 14 Oct 2026), recounted with grep; matches [E1] SEO-4. 11 pages.

What a non-rendering crawler sees on home: an H1 of `{{ heroPre }}<br>{{ rotatingChip }}<br>{{ heroPost }}`, plus `{{ heroSub }}`, `{{ featureCards }}` and `{{ ctaPrimary }}`. Privacy and terms H1s are `{{ title }}`; the privacy page renders 2,594 words, yet its server HTML has no match for its own opening line "Our approach to privacy". The runtime (`support.js`, "dc-runtime") downloads React 18.3.1 from unpkg.com and can lazily load `@babel/standalone`. Source: [E4] home; [E1] SEO-4; [E9] §A; [E5] privacy (2,594 words, wc) and [E4] privacy (0 matches for "Our approach to privacy")

Fix: static generation at build time. Pre-rendering improves initial content availability; measure its performance benefit alongside the third-party reductions in section 04.

02 · TECHNICAL SEO

2.2 Blog articles are absent from the initial HTML

The blog is built in the browser on query-string URLs (`/blog-post?slug=…`). Before JavaScript runs, every post is the same generic shell: title "Otto Blog — Smarter eye care, shared", canonical `https://ottooptics.io/blog.html`, H1 `{{ title }}`, and none of the article text (0 matches for "Manufacturer rebates" in the competitive-pricing post). The /blog index's server HTML contains 0 links to posts. The content arrives from `blog-posts.js`. Source: [E1] SEO-3; [E4] blog post and blog-posts.js

Two side effects: unknown slugs return HTTP 200 (a soft 404; re-measured on 14 Oct 2026), and the bare `/blog-post.html` renders "Post not found" with `robots: index, follow`. So in the server HTML all 5 posts declare the blog index as their canonical; which canonical Google selects after rendering needs Search Console verification. Source: [E1] SEO-3, SEO-7; [E8]

Content depth is thin as well: 5 posts, dated 2023-11-28, 2024-01-24, 2024-03-05, 2024-06-20 and 2026-08-25, which is a 26-month gap, all by Alex McIntosh. Source: [E1] SEO-10

2.3 Canonical, meta and Open Graph

CHECK	OBSERVED	FIX
Canonical vs sitemap	10 of 13 sitemap URLs canonicalise to a `.html` variant (e.g. sitemap `/product`, canonical `/product.html`). Only /, /privacy and /terms agree; `og:url` also uses `.html` on 12 of 15 pages. The audit counted 14–19 internal `.html` links per page; our re-check found 0 in the server HTML [inference: the links are in the JS-rendered nav and footer].	Extensionless everywhere; 301 `*.html`.
Duplicate URLs	All 13 pages answer at `/x` and `/x.html` with HTTP 200 and the same ETag (re-measured on /product, 14 Oct 2026).	One explicit Netlify `_redirects` rule per page, generated at build time (e.g. `/product.html /product 301!`); Netlify does not support a splat in mid-path such as `/*.html`.
Titles	Short on /blog ("Blog — Otto", 11 characters), /about (12), /pricing (14), /contact (14).	50–60 characters with the category term.
Descriptions	Long on /copilot (203 characters) and /eye-drop-ship (219); blog posts get descriptions of 155–158 characters only after JavaScript runs; their server HTML carries one generic 80-character description on every post.	140–155 characters, cut at word boundaries.
Open Graph	In the server HTML every page, posts included, uses the same `og-image.png` (1200×630, 55,455 B), so non-JS link previews show one generic card for everything. After JavaScript runs, posts switch to 646 px product PNGs, which is below the 1200×630 that `summary_large_image` expects.	Per-page OG cards.
Structured data	Home has only `Organization`, with `"sameAs": []`. No SoftwareApplication, FAQPage, BreadcrumbList or WebSite. Blog `BlogPosting` is injected by JavaScript.	SoftwareApplication with offers; sameAs; FAQPage only where a real FAQ is visible.

Source: [E1] SEO-1, SEO-2, SEO-6, SEO-8, SEO-9; [E3] (27 URLs × 2 devices); [E6] §0, §1.2, §1.4 (35 URLs, curl); [E3] (rendered og:image and description on posts); 14 Oct 2026

2.4 Headings

Once JavaScript runs, structure is sound: exactly one H1 per page, a logical H2 outline and `lang="en"`. The problems are in what the server sends and in one design choice. The server H1s on home, /product, /privacy and /terms are placeholders (2.1), and the home H1 rotates words ("contacts", "eye drops", "anything"); the crawl captured "Sell more anything do less work." on `/index.html`. Fix: a static H1 in the server HTML, with the rotating word as decoration and `prefers-reduced-motion` respected. Source: [E1] "What's working", A11Y-4; [E3]

02 · TECHNICAL SEO

2.5 Redirects, hosts and 404s: re-measured with [E8]

REQUEST	STATUS	WHAT IT MEANS
`GET http://ottooptics.io/`	301	Redirects to https. Correct.
`GET https://www.ottooptics.io/`	301	Redirects to `https://ottooptics.io`. Correct for the root only.
`HEAD https://www.ottooptics.io/`	405	Method not allowed. Link checkers and some bots use HEAD and will record an error.
`GET https://www.ottooptics.io/pricing` `GET https://www.ottooptics.io/product`	404 404	Deep www paths are not redirected. The responses come from a different server than the apex (headers show an AWS host, not Netlify). [inference] The www record points at a separate redirect service that only handles "/".
`GET https://www.ottooptics.io/about-us` `HEAD https://ottooptics.io/about-us`	404 404	The old About URL, still listed in search results with a stale snippet. No redirect on www or on the apex.
`HEAD https://ottooptics.io/zz-junk-path-report-check`	404	A real 404 status (good), but the body is Netlify's generic page: title "Page not found", 3,449 B, no navigation.
`GET /blog-post?slug=does-not-exist`	200	Soft 404.
`HEAD /product.html` and `/product`	200	Same ETag on both: duplicate content.

Source: curl -sI / -s -D, UA "Mozilla/5.0 (Windows NT 10.0; Win64; x64) … Chrome/141", 14 Oct 2026 22:29–22:31 UTC; stale /about-us listing from [E9] §A

2.6 HTTP security headers: re-measured

HEADER	/	/PRICING	404 PAGE	NOTE
Strict-Transport-Security	max-age=31536000	same	same	No `includeSubDomains`.
Content-Security-Policy	absent	absent	absent	Start in report-only mode.
X-Content-Type-Options	absent	absent	absent	Present only on the www 405 response.
X-Frame-Options / frame-ancestors	absent	absent	absent	Clickjacking protection.
Referrer-Policy	absent	absent	absent	
Permissions-Policy	absent	absent	absent	
Cache-Control	`public,max-age=0,must-revalidate` on all three			Fine for HTML; [E1] PERF-4 found the same on images and JS.

Source: curl -sI on https://ottooptics.io/, /pricing and /zz-junk-path-report-check, 14 Oct 2026 22:29 UTC (server: Netlify). This matches [E1] TRUST-5.

None of these hurts rankings, but a clinic's security questionnaire will check them. Set them once in Netlify `_headers`.

2.7 Sitemap and robots

`robots.txt` allows everything and points to the sitemap. The sitemap lists 13 URLs, every `<lastmod>` is 2026-06-15, and it omits `/copilot`, `/eye-drop-ship` and the newest post (`otto-copilot-just-ask`, 2026-08-25, featured as "Latest" on /blog). Generate it from the routes and post data at build time. Source: [E3] sitemap; [E1] SEO-5

03

Content & search

03 · CONTENT & SEARCH

Searching for "Otto" mostly finds someone else

Method: a US-only sample from one search tool that does not disclose its engine, run on 14 October 2026. "Position" is the order the tool listed results in. It shows no sitelinks, knowledge panels or ratings. Treat this as a snapshot, not rank tracking.

3.1 Brand queries: ottooptics.io returned for 1 of 4 in this sample

QUERY	OTTOOPTICS.IO RETURNED?	WHAT APPEARED INSTEAD
"Otto Optics"	Not returned	#1 optiknow.ca (2021 Marketing4ECPs partnership news); #2 trustburn.com review page; the rest are other companies (Otto Schott on Wikipedia, OPTIK-OTTO Munich, Optik Ott, OPTO4L).
"ottooptics"	Not returned	#1 marketing4ecps.com (Eye Drop Shop partnership); #2 optiknow 2021; #3 trustburn.
"ottooptics.io"	1st (/about)	Then the optiknow Sightly article (2024-10-17) and its PDF, marketing4ecps.com/tag/otto/, trustburn, and an eyecarebusiness.com article on VSP's "otto" app.
"Otto Optical Systems"	Not returned	A vision-systems buyers' guide, trustburn, OTTO Vision Technology GmbH (Jenoptik), Otto H. Schade.

Source: [E9] §A (WebSearch tool, US, 14 Oct 2026)

3.2 The trustburn review page

The page `trustburn.com/reviews/otto-optical-systems` appeared in all four sampled brand searches Source: [E9] §A. Its content and its relationship to Otto have not been assessed. We recommend Otto review the page, and strengthen its own site and verified profiles (LinkedIn, and G2 and Capterra once claimed). That gives searchers more first-party options; it does not guarantee any result order.

3.3 Name collisions

- **VSP "otto"**, an eye-care iPad app, the most confusing collision because it is in the same industry (eyecarebusiness.com coverage).
- **OPTIK-OTTO** (Munich optician), **Optik Ott**, **OTTO Vision Technology GmbH** (Jenoptik), and historical names (Otto Schott, Otto H. Schade).
- **"Otto" on G2** is a veterinary platform (g2.com/sellers/otto-…). A buyer who searches G2 for "Otto" finds the wrong product, and we found no G2 profile for Otto Optics.

Implication: the name "Otto" alone faces substantial name collisions. Use "Otto Optics" consistently as the brand-plus-category name in titles, profiles and press, and keep the legal name "Otto Optical Systems Inc." in the footer, schema and directory listings. Source: [E9] §A, §C

03 · CONTENT & SEARCH

3.4 Category queries: Otto returned only through its help centre

QUERY	OTTO RETURNED?	WHO APPEARED
contact lens reorder software for optometrists	No	Eyefinity (Abby, Arrellio, Dr. Contact Lens), Optometry Times, Dr. Contact Lens blog, MyAlcon FitSCAN, Vision Monday
optometry online store	No	optometry.org.au, Review of Optometry (VSP eyeconic), Compulink MyEyeStore, RevolutionEHR, opto.ca (Opfront)
optometry ecommerce platform canada	No	opto.ca (Opfront), a Marketing4ECPs PDF, CB Insights (Optify), Ocuco, Compulink, capterra.ca ×2
dry eye drop shipping optometry	#1 help article	know.ottooptics.io/knowledge-base/fulfill-dry-eye-orders-eye-drop-ship, then retail marketplaces
lens quote software optometry	#4, #5, #7 help articles	three know.ottooptics.io lens-quote articles among LensQuote, SaaS directories, ciela.ai
optometry practice AI assistant	No	OptoAI, Eyes On Eyecare, PatientPrism, Berkeley Optometry, myaifrontdesk, AOP
contact lens subscription platform for eye care practices	No	CooperVision LensFerry ×3, Healio, MyACUVUE, Eyes On Eyecare (Lens Butler)
optometrist webstore canada	No	clinic finders (Sun Life Lumino, FYidoctors, Oscar Wylie)

Source: [E9] §B (WebSearch tool, US, 14 Oct 2026; 8 queries)

What this says. Where Otto was returned for a category query in this sample (2 of 8), it was through plain, specific help articles on `know.ottooptics.io`, not the marketing site. The marketing site has no page that targets a category query: the features exist only as `/product#tour-*` anchors, and the blog's article text is absent from the initial HTML (2.2). Each returned help article is a template for a feature page on the main domain. Source: [E1] "Gaps" 4

Copilot is absent from AI-assistant search. Otto launched Copilot in August 2026 (Vision Monday covered it on 19 and 25 August), yet in this sample "optometry practice AI assistant" returned six other products and no Otto page. The /copilot page is also missing from the sitemap. Source: [E9] §B, Press; [E1] SEO-5

3.5 Competitors that keep appearing

PRODUCT	OWNER TYPE	PUBLISHED PRICE	HOW IT LEADS (TITLE OR H1, FROM CURL)
Alcon MARLO	Manufacturer	Free / US$24.95 / US$49.95 per month per door (home.meetmarlo.com/pricing)	Title "MARLO"; no H1 in server HTML [inference: JS-rendered]
ABB "Abby"	Distributor	"FREE… for both Doctors AND Patients"	"And now, with Abby, reordering contact lenses via text message!"
Dr. Contact Lens	Independent	Not published ("based on your practice size")	"Contacts in One Click. Revenue on Autopilot."
Weave	Horizontal SaaS	"starting from $199 per month"	"Designed to help grow your eyecare practice."; shows a G2 rating badge

Source: [E9] §D (curl with Chrome UA, 14 Oct 2026); MARLO price verified on home.meetmarlo.com/pricing per [E11] (14 Oct 2026)

Also recurring in category results: Compulink MyEyeStore, Opfront, Arrellio, OptoAI and CooperVision LensFerry. MARLO and Abby advertise free offerings, and Weave shows a G2 rating; for Otto we found neither a review-platform profile nor a free tier. Source: [E9] §B, §C

03 · CONTENT & SEARCH

3.6 Footprint

ASSET	URL	WHAT IT SHOWS
About page	ottooptics.io/about	Founder story ("In early 2021, Otto was born"); "800+ clinics & 900K+ patients"; team in Regina, Toronto, Calgary
LinkedIn company	ca.linkedin.com/company/otto-optics	"Otto Optical Systems"; 839 followers; Toronto; founded 2019 **unverified (search summary)**
LinkedIn product	linkedin.com/products/otto-optical-systems-otto-contact-lens-automation-software/	"Otto: E-Commerce for Eyecare"; 90-day money-back guarantee **unverified (search summary)**
Facebook, Instagram	facebook.com/ottooptics.io, instagram.com/ottooptics.io/	Linked from know.ottooptics.io, not from the main site
YouTube, X	none	youtube.com/@ottooptics returns 404
Knowledge base	know.ottooptics.io	"In the Know with Otto", plus a blog
Crunchbase	crunchbase.com/organization/otto-e67e	"Automation software for contact lenses" **unverified (search summary)**
Wellfound	wellfound.com/company/otto-optical-systems	"Founded in late 2019 and officially launched in the spring of 2021"
G2, Capterra, Software Advice, GetApp	none found	No profile found
Google Business Profile	not observable	The search tool does not show map or knowledge-panel results

Source: [E9] §C (WebSearch/WebFetch/[E8])

Press found: Optik (2021-06-15, Marketing4ECPs partnership); Marketing4ECPs (Eye Drop Shop partnership, April 2023); optiknow and opticalprism.ca (Sightly acquisition, 2024-10-17); opticalprism.ca (EHR integrations, undated); Vision Monday (AI Copilot, 19 and 25 Aug 2026); invisionmag.com; reviewob.com; an NJSOP info sheet. None of it is linked from ottooptics.io, which has no press page. Source: [E9] §C; [E1] TRUST-4

3.7 Public facts to clarify and date

FACT	WHAT IS PUBLISHED	WHERE
Founding milestones	2019 (LinkedIn); "Founded in late 2019 and officially launched in the spring of 2021" (Wellfound); "founded in 2020 by Alex McIntosh and Adam Geiger" (Optik); "In early 2021, Otto was born" (/about). Which date marks what?	LinkedIn · Wellfound · Optik 2021 · /about
Founding team	Adam Geiger named as co-founder in 2021; not on /about today. How should it be described?	Optik 2021 · /about
Clinic count	200+ **unverified (search summary)** · 650+ · 800+, none dated. As of when?	search summary · NJSOP info sheet · home, /why-otto, /about
Sales lift	"32%" · "38% increase in contact lens sales on average". Same cohort, period and calculation?	home, /why-otto · blog post "Outsmarting e-commerce giants"
Setup time	"30 minutes or less" · "a 20-minute setup plan". The same activity?	home, /product, /why-otto · /contact
Clarke's title	"Chief of Staff" · "VP Business Operations". Likely a role change [inference].	stale /about-us snippet · /about

Recommendation: one source of truth

Keep one company facts file in the site repository: legal name, brand name, founding milestones (each saying what it marks: founding, incorporation or launch), founders, HQ city, clinic count, patient count and every marketing statistic, each with a source, cohort, period and "as of" date. The site, the profiles and press boilerplate all draw from it. Figures without a source come off the public site until one exists. Source: [E11] "Proof"

04

Performance

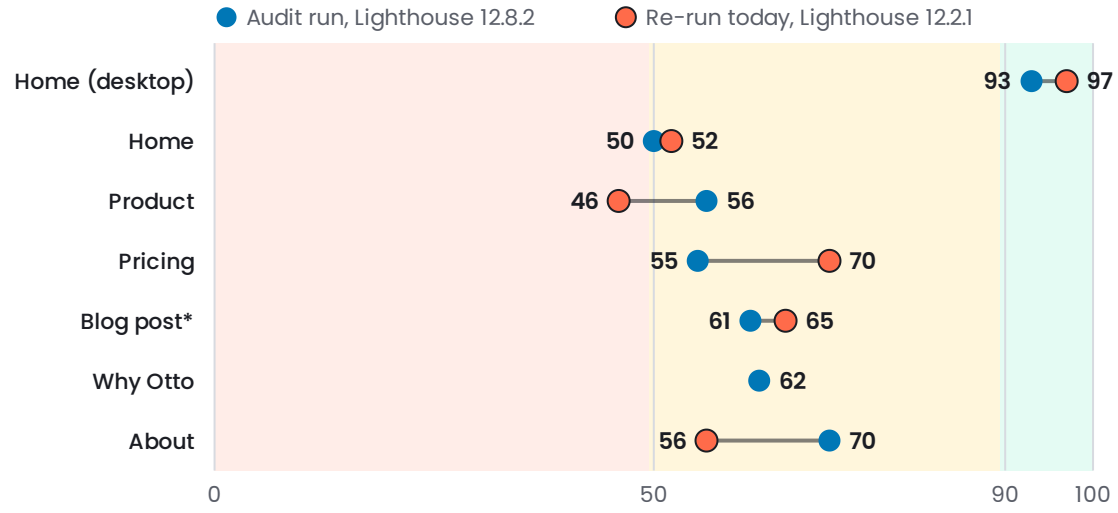

04 · PERFORMANCE

Fast on desktop, slow on phones

Two single runs, read as directional ranges. Lighthouse ran once per URL in the audit (12.8.2, 19:35–19:38 UTC) and once more in our re-run (12.2.1, 22:28–22:37 UTC), both on 14 Oct 2026. Our two runs differed by up to 15 Performance points on the same page (pricing 55 and 70), so we show both values and do not average them. Every audit mobile run, and the re-run of mobile home, warned of a slow test CPU. The pattern (mobile well behind desktop, held back by scripts) appears in both runs. The exact scores should not be quoted as fact. Source: [E2]; [E7]; [E6] §2

Lighthouse Performance score, two runs

Mobile unless marked. Background bands: poor 0–49, needs work 50–89, good 90–100. *The blog post differs between runs: competitive-pricing in the audit, sell-dry-eye-products-online today.

Source: Lighthouse 12.8.2 ([E2]) and 12.2.1 ([E7]), 14 Oct 2026, 1 run per URL per tool; 13 runs plotted. Why Otto was not re-run.

Source: [E2] (audit) and [E6] §2 table (today); weight = total-byte-weight ÷ 1024. "—" = not run.

04 · PERFORMANCE

Largest Contentful Paint, two runs

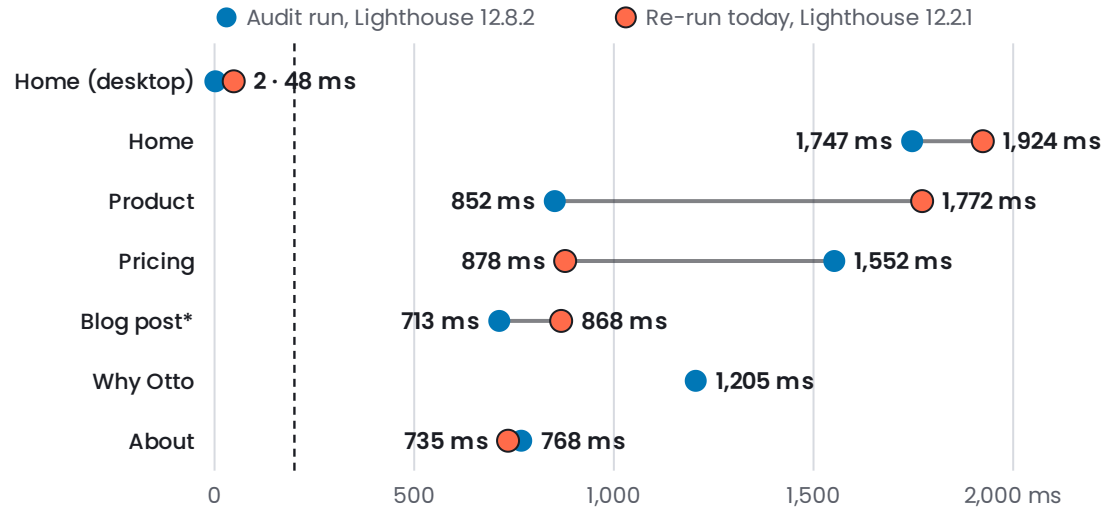

Seconds; mobile unless marked. Dashed line: 2.5 s, Google's "good" threshold. *Different blog post in each run.

Source: Lighthouse 12.8.2 ([E2], LCP) and 12.2.1 ([E7]), 14 Oct 2026, 1 run per URL per tool. Threshold: web.dev/articles/lcp (reference value, not re-fetched).

Total Blocking Time, two runs

Milliseconds the main thread was blocked; mobile unless marked. Dashed line: 200 ms, Lighthouse's "good" limit. Paired labels read audit · today.

Source: Lighthouse 12.8.2 ([E2], TBT) and 12.2.1 ([E7]), 14 Oct 2026, 1 run per URL per tool. Threshold: Lighthouse TBT scoring documentation (reference value, not re-fetched).

Every mobile run in both rounds misses the 2.5 s LCP and 200 ms TBT thresholds. The values move between runs, sometimes a lot (About LCP 3.4 s, then 6.3 s), but none lands inside the "good" range. Layout stability is fine: CLS stays between 0 and 0.061 on every run, inside the 0.1 limit. Source: [E2]; [E1] §2

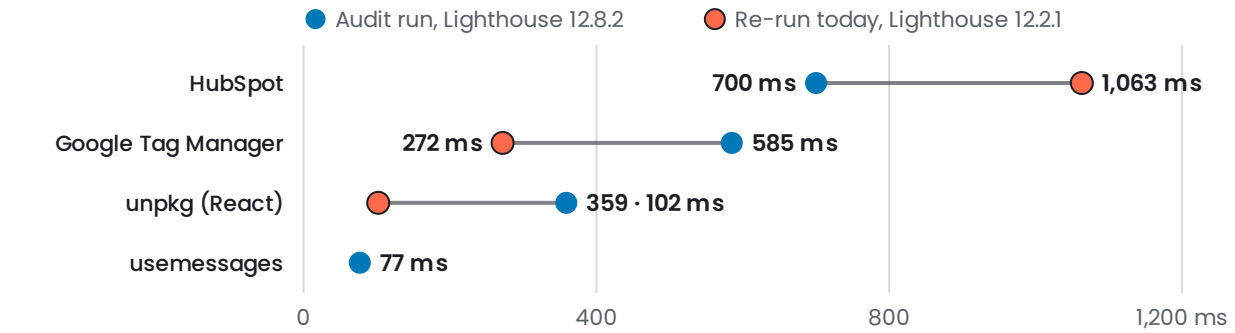

LCP on mobile home was the cookie banner in the audit run: HubSpot's consent text (`#hs-eu-policy-wording`). Google Fonts is render-blocking (Lighthouse estimated 870 ms), and the hero cannot paint until scripts build it.

Source: [E1] PERF-3

04 · PERFORMANCE

Who blocks the main thread on mobile home

Third-party main-thread blocking time, milliseconds. The total moves between runs; HubSpot leads in both. Paired labels read audit · today.

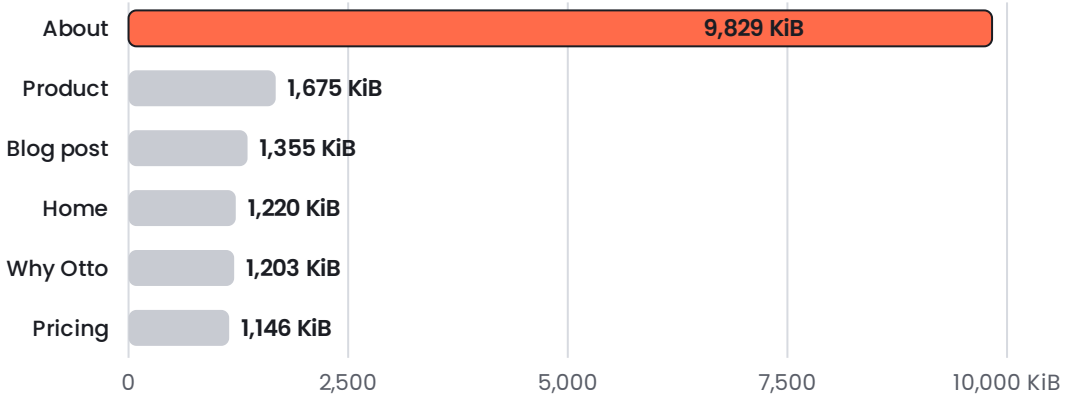

Source: Lighthouse 12.8.2 home mobile ([E1] PERF-1) and 12.2.1 home mobile ([E6] §2), 14 Oct 2026, 1 run each.

Third-party code is **1,117 of 1,222 KiB (91%)** of what mobile home downloads in today's run: hsappstatic.net 681 KiB, Google Tag Manager 152, HubSpot 130, Google Fonts 73, unpkg 47, usemessages.com 30. HubSpot's script and `support.js` load on every page before any consent. On mobile /product the React download from unpkg blocked the main thread for 986 ms. Source: [E6] §1.6, §2

Page weight

Total bytes transferred on mobile, KiB, audit run. Home, product, pricing and About differed by <1% in today's run (About: 10,056,370 B); the blog runs used different articles; Why Otto was not re-run.

Source: Lighthouse 12.8.2, [E2] (total byte weight), 14 Oct 2026, 6 mobile runs; cross-checked against 12.2.1 [E7]. Crawl byte counts were not used (mobile pass returned HTTP 304).

The About page's six team photos total **8,861,332 B** (curl, re-confirmed); the largest is a 3,846,031 B PNG. Lighthouse estimates 6,878 KiB of savings from responsive images alone. Source: [E6] §1.7, §2

04 · PERFORMANCE

How the competitors' home pages score

Only one competitor run completed: Dr. Contact Lens scored 43 on mobile Performance, against Otto home's 50 and 52. The other three runs did not finish loading in time and are listed as failed attempts. Results are not comparable enough to rank vendors.

SITE (MOBILE)	PERF.	A11Y	SEO	LCP	TBT	RUN STATUS
Otto, home	50 · 52	95	100	5.4 · 4.5 s	1,747 · 1,924 ms	Complete (slow-CPU warning)
Dr. Contact Lens (drcontactlens.com)	43	91	100	7.3 s	842 ms	Complete
Abby (helloabby.com)	36	87	100	9.4 s	2,920 ms	Failed attempt: did not finish loading; not compared
MARLO (home.meetmarlo.com)	18	91	100	20.7 s	3,207 ms	Failed attempt: did not finish loading; not compared
Weave (getweave.com, optometry page)	16	80	85	6.0 s	8,494 ms	Failed attempt: did not finish loading; not compared

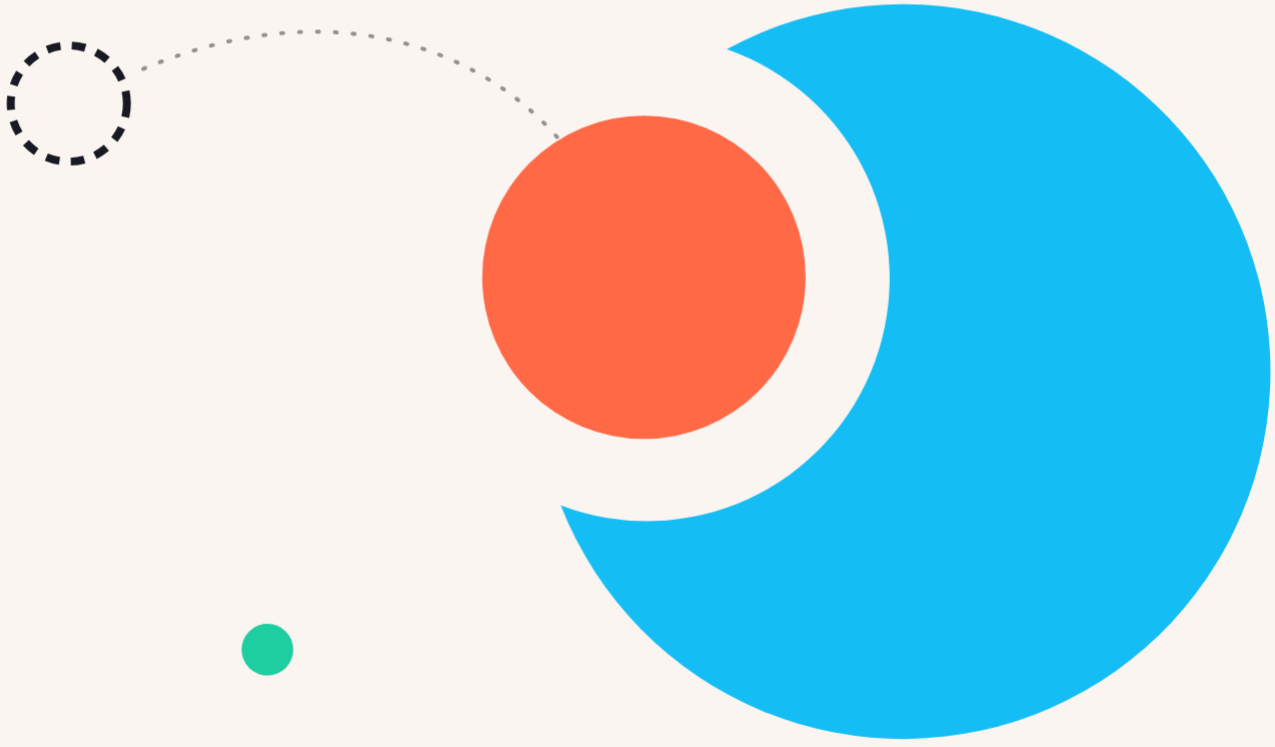

Source: Lighthouse 12.2.1, [E7] competitor runs, 14 Oct 2026, 1 run each; Otto values from both runs as above. Failed attempts are shown for completeness only.

Fixes to make and measure

1. **Load optional tracking only after consent; defer eligible widgets further, until requested.** HubSpot blocked the main thread on mobile home for 700 ms in the audit and 1,063 ms today. Review whether the Google Ads tag loaded via GTM is needed; Lighthouse found about 57 KiB of it unused during page load. Source: [E1] PERF-1; [E6] §2
2. **Pre-render the pages** (section 02). This removes the React download from unpkg (359 ms on home in the audit, 986 ms on /product today) and lets the hero paint from HTML; measure the benefit.
3. **Replace the HubSpot banner** with a compact consent bar. This also changes the mobile LCP element. Source: [E1] MOB-1, PERF-3
4. **Resize the About photos** (8.86 MB across six files) and the 1,090,142 B blog cover to WebP or AVIF close to the size they display at. Source: [E6] §1.7
5. **Self-host and preload the two fonts**, and fingerprint assets with `max-age=31536000, immutable`. Today HTML, JS, PNG, JPEG, WebP and SVG are all served with `max-age=0`. Source: [E6] §1.5; [E8]

05

Brand & conversion

05 · BRAND & CONVERSION

Strengthen the evidence behind the brand

The audit rates Otto's visual design well above typical optical-software vendors. The opportunity is to back its claims with evidence a buyer can check.

5.1 Brand essence, from the brand study

> "Otto keeps the eye-care relationship, and the revenue that comes with it, inside the independent clinic, with software so light and friendly that it feels like less work, not more."
> Source: [E10] §2 (drawn from /about, /product, home and /why-otto copy)

The study found five attributes in Otto's own words: **clinic-loyal** ("patients quietly leaking out to online and big-box retailers"), **insider-built** ("Built for eyecare, by eyecare"), **effortless** ("Sell more … do less work."), **playful and warm**, and **commercially sharp** ("Stay priced to win, automatically."). The buyer is the owner-optometrist or manager of an independent clinic; front-desk staff are the daily users; patients see the clinic's store, with Otto only as a "Powered by Otto" credit. Source: [E10] §1–2

5.2 Positioning after review

An AI-assisted brand review (Astra, 14 Oct 2026; advisory, reviewed by the project team) tightened the essence for internal use, not as a headline:

> "Otto helps independent eye-care clinics stay the place patients buy from, with commerce under the clinic's name and less work behind the counter."
> Source: [E11] "Accepted"

#	ATTRIBUTE	ROLE IN THE BUYING DECISION
1	Clinic-loyal	The motivation
2	Low-friction (replaces "effortless")	The adoption test
3	Commercially clear (replaces "sharp")	The justification
4	Dependable (new; needs evidence)	The potential veto, mainly security and uptime
5	Human and eye-care fluent (merges insider-built and playful)	The preference builder

Voice. Keep: gain paired with relief, plain commercial language, clinic vocabulary. Retire: "playful little portal", "never miss another sale", "already behind", "numbers don't blink", "join hundreds". Pricing, security and data copy should be literal. Source: [E11] "Voice"

Proof. No empty logo walls, testimonial carousels or unsourced statistics on public pages. A statistic needs a source, date, cohort, period and calculation. "Not retained" and "not used for training" are two separate Copilot claims, each to be confirmed by Otto. Source: [E11] "Proof"

05 · BRAND & CONVERSION

5.3 The MARLO overlap: "uncontested" claims are dropped

The brand study first read "your brand, every supplier" as white space no manufacturer tool could take. Checking MARLO's own pricing page disproved that.

	ALCON MARLO	OTTO
Practice branding	Yes ("brand MARLO … with YOUR practice name")	Yes ("Custom Branded Online Store")
Multi-manufacturer ordering	Yes	Yes ("Integrated Contact Lens Ordering"; J&J, Alcon, CooperVision, B+L, ABB…)
Price	Free / US$24.95 / US$49.95 per month per door	Otto Pro CA$197.10 / month, Otto Premium CA$287.10 / month, billed yearly (CA$2,365.20 and CA$3,445.20 per year)
Source	home.meetmarlo.com/pricing, verified 14 Oct 2026 ([E11])	ottooptics.io/pricing, [E5] pricing, 14 Oct 2026

The currencies differ, and the products are not identical, so this is not a like-for-like price comparison. The point is narrower: the ownership claim is not unique, and a clinic comparing the two will see a free tier on one side. Abby also has a warm character voice, and Dr. Contact Lens also claims optometrist origins. Source: [E11] "Study corrections"

Specific capabilities to demonstrate, rather than tone or ownership: Eye Drop Ship (fulfilled by Eye Drop Shop in Canada and Dry Eye Rescue in the US), lens quotes, a daily competitor price check, multi-supplier accounts, and Copilot. Each needs its own page and its own proof. We have not established which of these competitors lack, so present them as Otto's capabilities, kept separate from plan availability and from comparative claims. Source: [E10] §1; [E11]

5.4 Calls to action and conversion

OBSERVATION	EVIDENCE	RECOMMENDATION
Two clear CTAs	"Get started in 30 minutes" → app.ottooptics.io/register; "Book a demo" → HubSpot meetings. An interactive demo (demo.ottooptics.io/demo) and a YouTube walkthrough exist.	Keep both. This is a strength.
The primary button is hard to read	White on #18BFF7, 2.13:1, on every page.	#0077B6 with white text.
The cookie banner covers the CTAs	About 27% of the mobile viewport, on every mobile fold; about 18% of the desktop fold.	Compact consent bar.
"Book a demo" leaves the site for a personal link	`meetings.hubspot.com/alex1344/…`	Embed a team scheduler on /contact.
No price above the fold on /pricing	A Copilot promotion fills the pricing fold.	Plans first.
Pricing friction	CAD only, though Eye Drop Ship advertises US fulfilment. No FAQ, no contract-term, setup-fee or trial statement. "Ongoing Pricing Support ($50/update)" is listed as a Premium feature although it is a charge.	Currency switch, 6–8 question FAQ, plain terms.
Proof is unverifiable	Letter-avatar testimonials, some attributed only to "Clinic"; unsourced figures ("825% average return", "2,000+ orders routed daily", "5.0 from 2,400+ patient reviews"); no review-platform badges.	Only sourced, permissioned proof.
Copy	H1 "Sell more contacts do less work." lacks a comma; /why-otto H1 "You're already behind" is fear-led.	Static, plain H1.

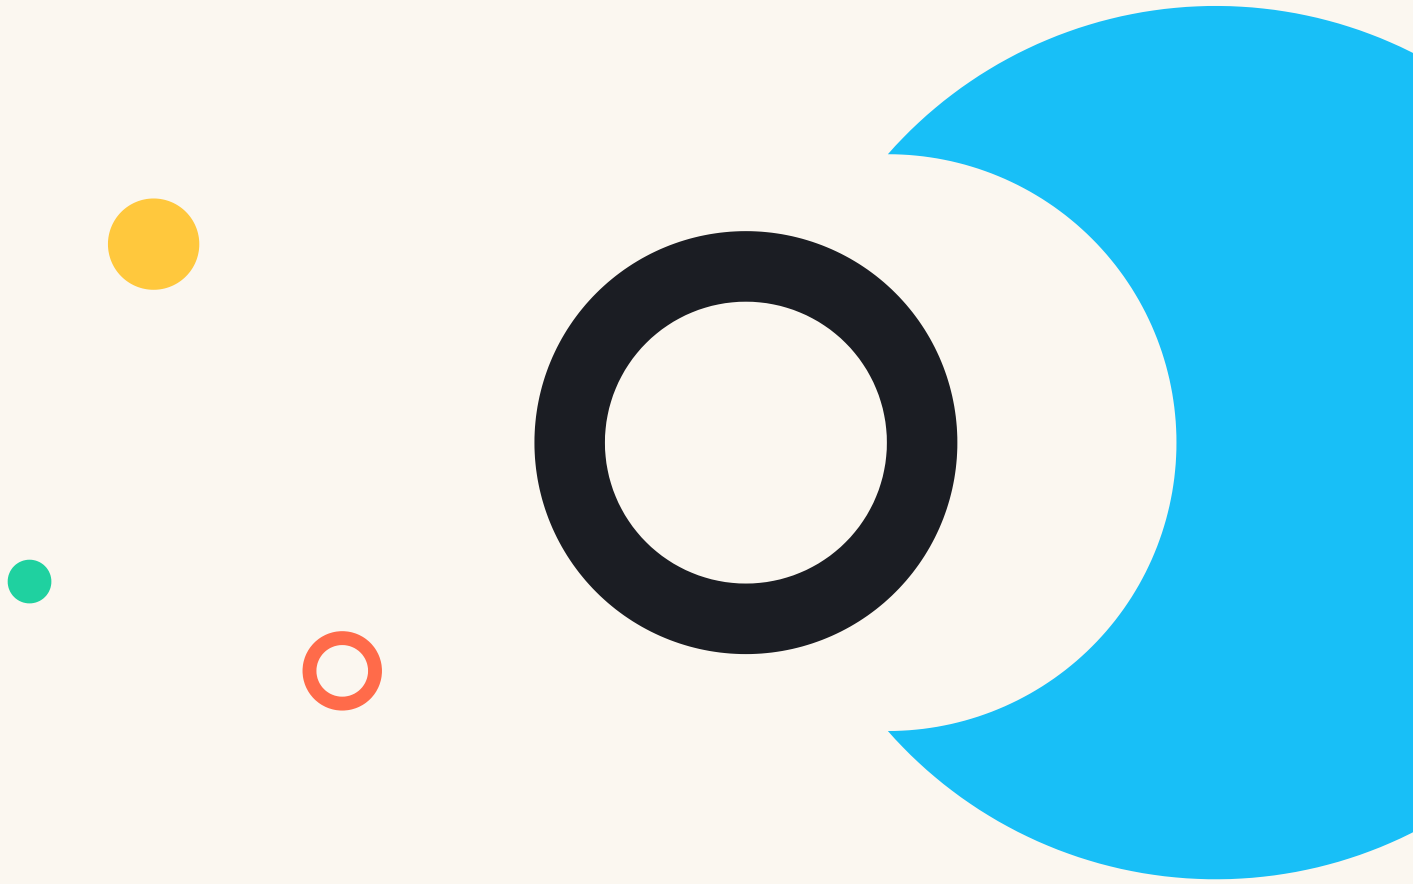

Source: [E1] CONT-1, CONT-2, CONT-3, A11Y-1, MOB-1, TRUST-3, TRUST-4; [E5] pricing, home; [E4] home; 14 Oct 2026

A · B · C

Design directions

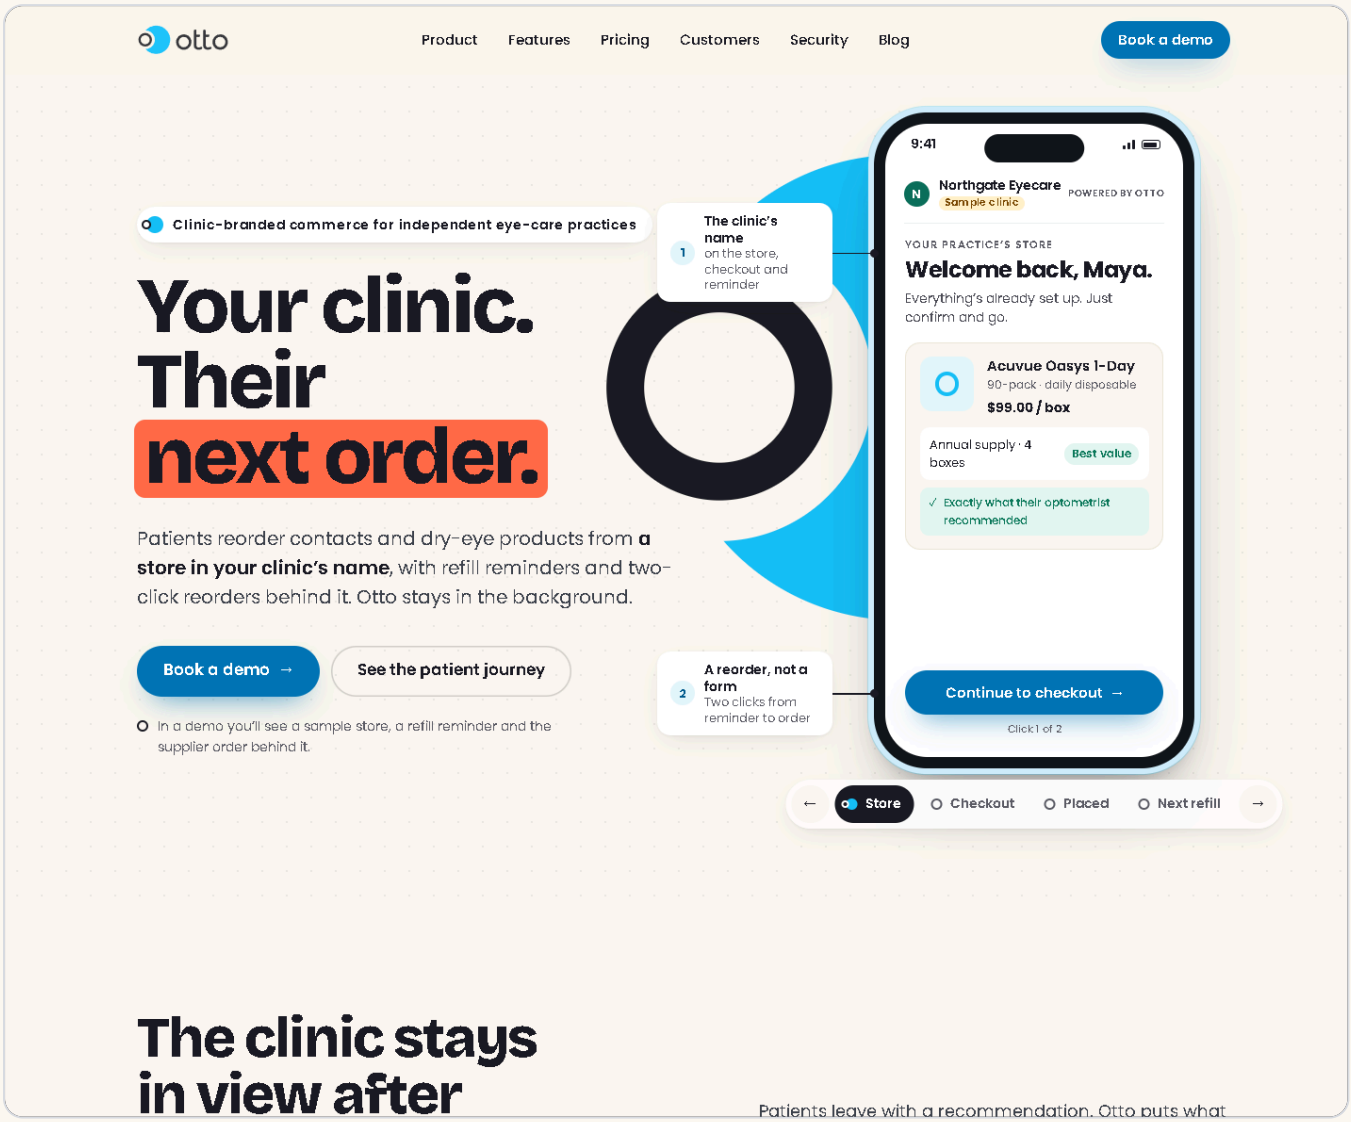

Three directions for the rebuilt site. They are not three colour schemes: each is built around a different reason an owner-optometrist buys Otto. All three share the fixes in this report (pre-rendered pages, accessible CTA blue, no unsourced proof) and the logo's ring, disc and cut-out as the only motif.

Prototypes: evidence item E13. Screenshots use a sample clinic and illustrative amounts, not Otto data. Prototype copy that refers to security details or prices is placeholder: those details are awaiting Otto's confirmation.

DIRECTION A · BUYER MOTIVATION: PATIENT CONTINUITY

"Still your clinic"

Source: [E13] direction A screenshot (prototype, top of page), captured 14 Oct 2026

The idea

Patients keep buying from the clinic that examined them, and the store says so. The patient's phone leads the page, showing a labelled sample clinic, so "whose name is on it" is the first thing a visitor understands.

Who it speaks to

The owner-optometrist worried about patients drifting to online and big-box retailers. Mood: warm, patient-facing, confident, clinic-first.

Signature pattern

A **patient view / clinic view split** repeated through the site: what the patient sees in the clinic's store, beside what the clinic sees behind it. Follow-on sections cover patient continuity, then the staff and ordering workflow.

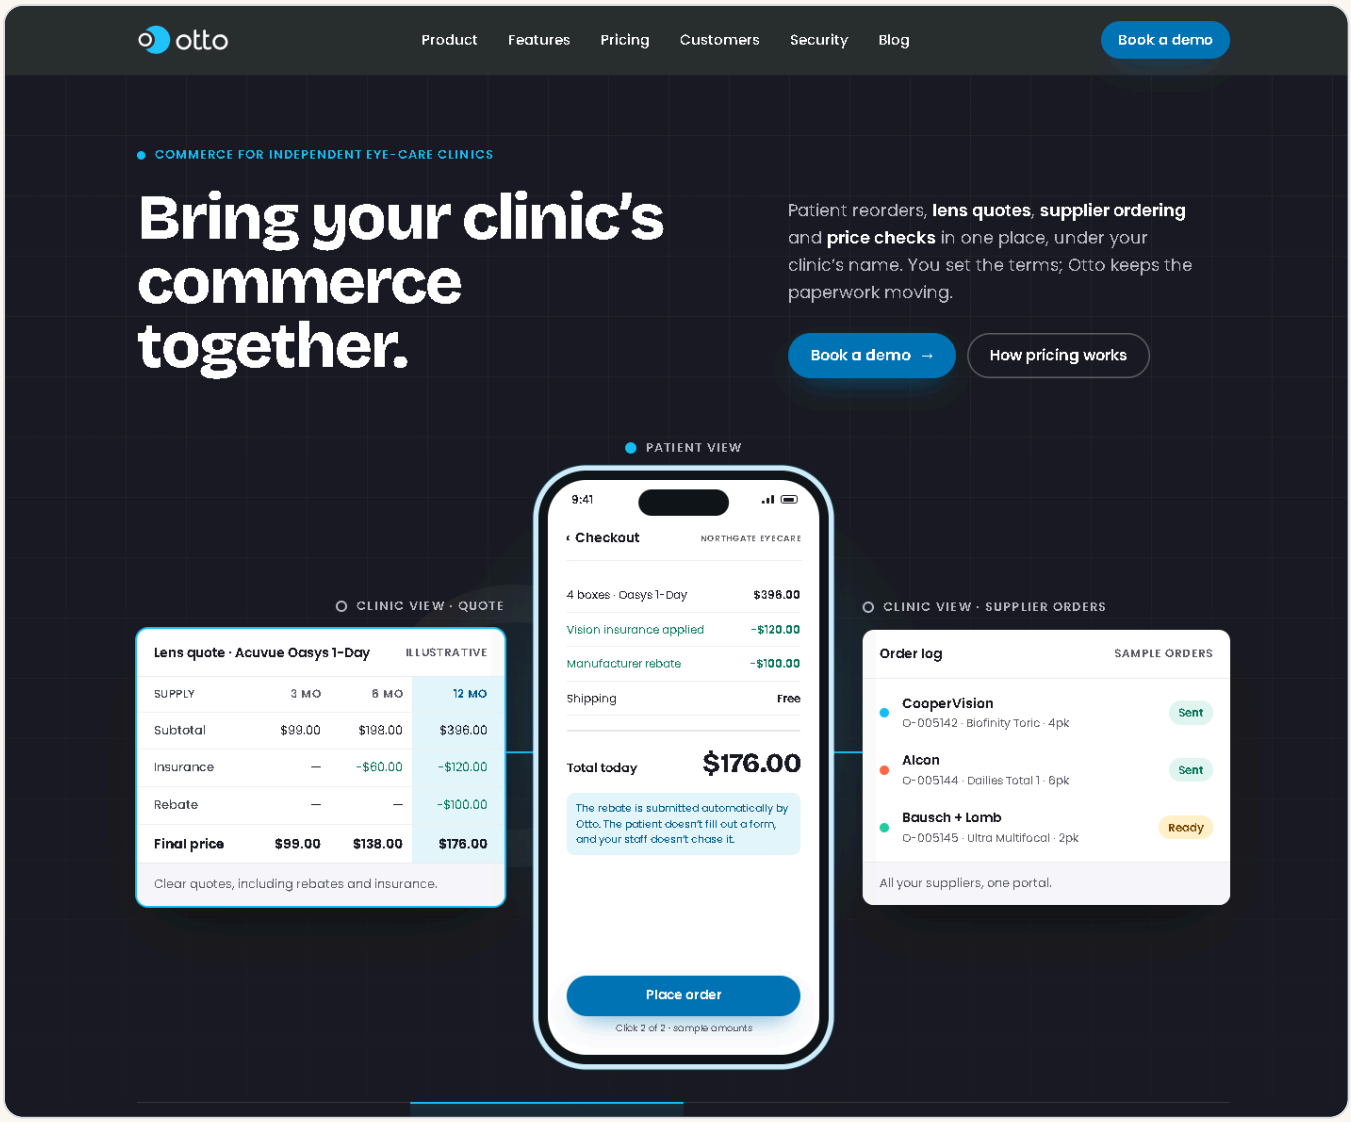

Reviewers

AI-assisted brand review (Astra) ranks A first, with C's operational detail supporting it. Risk: it rests on the ownership idea that MARLO also offers (5.3), so its proof must come from the specifics.

Source: [E13] A; [E11]; [E12]

DIRECTION B · BUYER MOTIVATION: COMMERCIAL CONTROL

"Your commerce, your call"

Source: [E13] direction B screenshot (prototype, top of page), captured 14 Oct 2026

The idea

The clinic keeps every commercial decision: suppliers, quotes, prices, which dry-eye products to sell. Otto does the follow-through. The phone sits between a lens-quote panel and a supplier order log; ink covers about 30% of the page.

Who it speaks to

The owner or manager who runs the optical as a business and judges software on margin and control. Mood: structured, commercial, precise, calm.

Source: [E13] B; [E11]; [E12]

Signature pattern

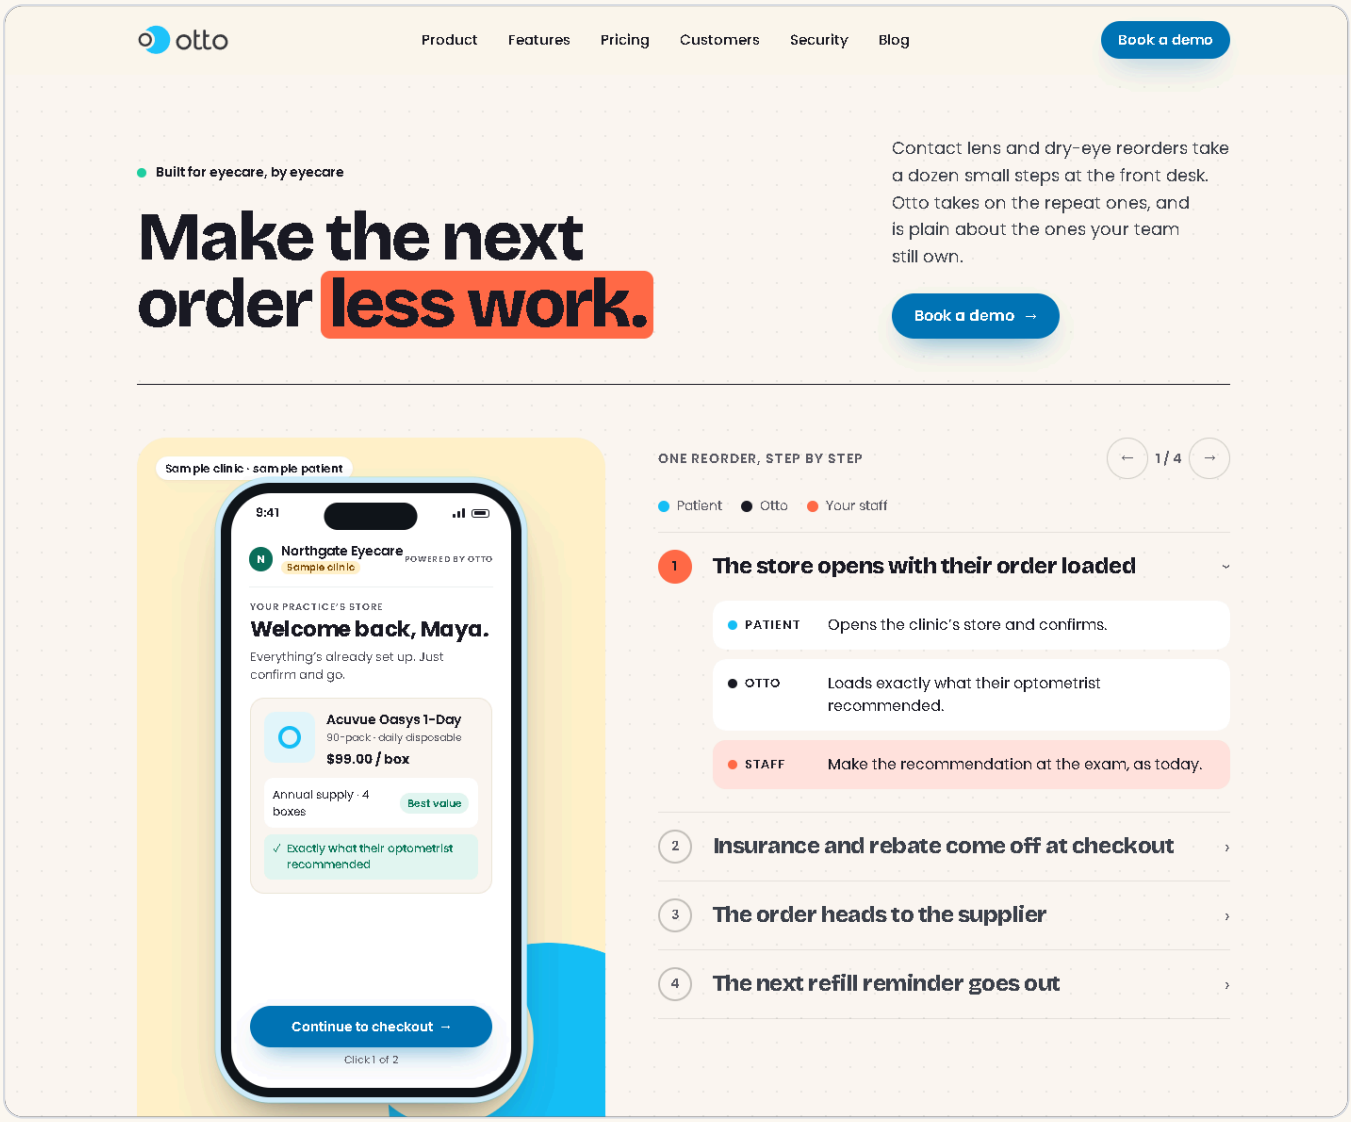

A **"Your call / What Otto takes on"** row, reused as the template for every feature, pricing and security page. Copilot is secondary; no AI-led visuals.

Reviewers

AI-assisted brand review (Astra) ranks B third: a real alternative, but MARLO's US$25–50 price makes paid-value proof harder for a commerce-led pitch. AI-assisted design critique (DeepSeek R1) considered B and C more durable than A.

DIRECTION C · BUYER MOTIVATION: STAFF WORKLOAD

"A lighter clinic day"

Source: [E13] direction C screenshot (prototype, top of page), captured 14 Oct 2026

The idea

Otto takes work off the front desk. An editorial cream layout annotates each step with who does it: the patient, Otto, or staff. Founder material sits lower on the page.

Who it speaks to

The practice manager and the owner who feels the admin load of reorders, quotes and supplier orders. Mood: editorial, human, specific, unhurried.

Source: [E13] C; [E11]; [E12]

Signature pattern

Every feature page opens with **"The job today"**, then **Patient / Otto / Staff lanes**, then a **"Staff still"** callout that says plainly what remains manual.

Reviewers

Astra ranks C second and suggests its operational specificity supports A. AI-assisted design critique (DeepSeek R1) considered B and C more durable than A.

DESIGN DIRECTIONS · REVIEWS AND DECISION

Two AI-assisted reviews, two leanings. The pick is yours.

AI-assisted brand review (Astra), 14 Oct 2026

A > C > B. A as the lead, with C's operational specificity supporting it. B remains a real alternative, but MARLO's price makes paid-value proof harder for a commerce-led pitch.

Source: [E11] "Ranking"

AI-assisted design critique (DeepSeek R1), 14 Oct 2026

Leaned B or C, judging them more durable than A. We record this as opinion, not as a finding. Its 12 accepted points were accessibility and layout fixes now applied to all three.

Source: [E12]

Both are advisory opinions, reviewed by the project team. The basis for Otto's decision is buyer fit and the trade-offs on each direction page.

What does not change with the pick

- Pre-rendered HTML, a static H1, extensionless URLs and 301s (section 02).
- CTA blue #0077B6 for buttons; cyan only for shapes and ink-on-cyan accents.
- The logo's offset ring, disc and cut-out as the only motif; the eye appears only inside Copilot.
- No unsourced statistics, testimonials or logos until Otto supplies them with permission.
- Security pages list plainly what Otto reads and what it does not, with no compliance claims until Otto confirms them.

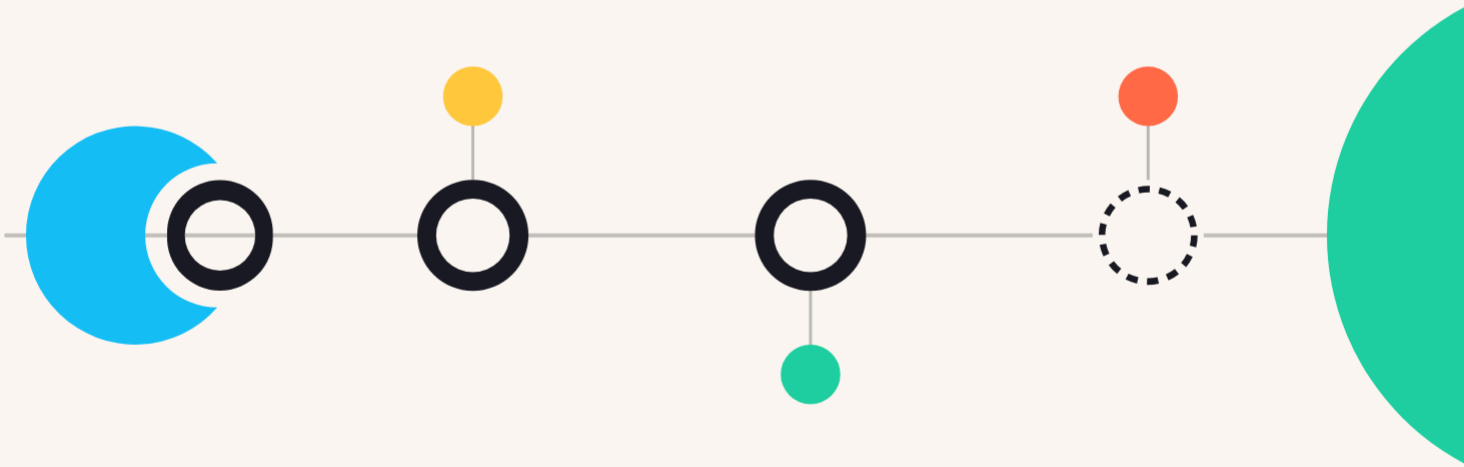

Open questions for Otto

1. **Which buyer leads?** Single-location owner-ODs, multi-location groups, or buying-group members? This decides between A (continuity), B (control) and C (workload).
2. **Is Copilot the headline product for the next year**, or a supporting feature? What happens to its pricing after the free period?
3. **Canada or the US first?** Should USD pricing and US partners lead?
4. **Screenshots or coded mock-ups?** Can Otto supply high-resolution product screenshots, a hero video and clinic photography, or do coded mock-ups stay primary?
5. **What does the logo mean** to you (lens, eclipse, something else), and may we keep extending it as the motif?
6. **Is the "You're already behind" tone** one you want to keep? Every direction currently retires it.

Source: [E10] §8; [E11]

06

Roadmap

06 · ROADMAP

30 / 60 / 90 days

Measure first, then fix. Timing assumes the scope, owner and Otto inputs are agreed; items marked *Otto* need facts or permissions only Otto can supply.

Days 1–30: baseline, then fix the initial HTML

- **Days 1–7, before any change:** Search Console and Bing access; Canadian and US search baselines; demo-request and booking tracking; request security, privacy and legal inputs. *Otto*
- **Render templates server-side or pre-render** every page; static `/blog/<slug>/` pages. (Issues 1, 2)
- **Before launch:** explicit per-page 301s from each `.html` URL; `/about-us` → `/about`; www domain and DNS so every www path reaches the apex; old blog URLs → new; test unknown slugs and redirect chains. (3, 11)
- **Align** canonical, og:url, sitemap and internal links; generate the sitemap. (3)
- **Brand results:** "Otto Optics" in titles; Organization `sameAs`; About page with the entity facts. (4)
- **Reconcile the stats** into one facts file; remove unsourced figures. *Otto* (5)
- Before launch: CTA #0077B6; consent bar, tracking after consent; self-hosted fonts; long-lived caching; conversion testing. (6–8)
- Resize the About photos and blog cover. (10)

Days 31–60: trust and depth

- **/security page** and a fuller Copilot data-use statement once Otto's inputs arrive; reviewed privacy policy. *Otto* (9)
- **Claim G2 and Capterra**; a Google Business Profile only if Otto is eligible (in-person customer contact). *Otto* (4)
- **Security headers** in `_headers`: CSP (report-only first), X-Content-Type-Options, frame-ancestors, Referrer-Policy, Permissions-Policy.
- **Pricing:** plans above the fold, CAD/USD, a 6–8 question FAQ, contract and trial terms. *Otto*
- **Feature pages** for webstore, refill reminders, ordering, lens quotes, competitor pricing, built from the help articles that already rank.
- Per-page OG cards; SoftwareApplication schema; FAQPage only where an FAQ is visible.
- A press page linking existing coverage.

Days 61–90: grow and re-measure

- **Copilot content** aimed at AI-assistant queries: what it answers, what data it reads, worked examples. (12)
- **Comparison pages** (vs MARLO, Abby, Dr. Contact Lens) that are factual and dated.
- **Integrations pages** per EMR and supplier, with logos where permitted. *Otto*
- **Customer stories** with named clinics and sourced numbers. *Otto*
- Ask current clinics for reviews on G2 and Capterra, and on Google only if a Business Profile is eligible.
- **Re-measure** against the day 1–7 baselines; re-run Lighthouse with 3+ runs per URL on a calibrated device; re-sample the brand and category queries, including a Canadian sample.

How we will know it worked

SIGNAL	TODAY	ASPIRATION AT DAY 90
`{{ }}` in server HTML	120 across 11 pages	0
Sitemap URLs with a mismatched canonical	10 of 13	0
Brand queries where ottooptics.io appears (sampled)	1 of 4	4 of 4
Blog posts with their own title in server HTML	0 of 5	all
Mobile TBT, home (directional)	1,747 and 1,924 ms (two runs)	under 200 ms
Primary button contrast	2.13:1	≥ 4.5:1
Qualified demo requests; booking completion	Not yet measured	Baseline in days 1–7; target set with Otto

Source: Baselines: [E4]; [E1] SEO-1, SEO-3, A11Y-1; [E9] §A; [E2]; all 14 Oct 2026. Targets are our aspirations, not commitments or industry figures.

APPENDIX

Method and caveats

EVIDENCE	HOW IT WAS GATHERED	CAVEAT
Lighthouse, audit run	Lighthouse 12.8.2, home on mobile and desktop; product, pricing, a blog post, why-otto and about on mobile. 14 Oct 2026, 19:35–19:38 UTC. [E2], which records the exact command.	One run per URL. Every mobile run warned of a slow test CPU. Mobile Performance is directional only.
Lighthouse, re-run	Lighthouse 12.2.1, the same five Otto pages on mobile and desktop (blog post: sell-dry-eye-products-online) plus 4 competitor home pages on mobile. 14 Oct 2026, 22:28–22:37 UTC. [E7].	One run per URL. Both runs are shown, not averaged. 3 of the 4 competitor runs were incomplete.
Re-check crawl	curl, one GET per URL, 35 URLs including `.html` twins; checked the audit's claims ([E6] §0).	All but one audit claim reproduced. The count of .html internal links did not, and it is not used as a headline.
Crawl	Headless Chrome, 27 URLs (with and without `.html`) at 1440 px desktop and 390 px mobile: titles, meta, canonical, OG, headings, links, images, requests. [E3].	Mobile byte counts are wrong (HTTP 304 from cache). Page weight in this report uses Lighthouse total-byte-weight.
Server HTML	curl before JavaScript, [E4]; placeholders recounted with grep.	Captured 14 Oct 2026; the live site may change.
Rendered text	[E5], visible text per page after rendering.	Source for the statistics conflicts.
Search and footprint	Claude Code WebSearch (US-only, engine undisclosed), WebFetch and curl with a Chrome user agent. [E9].	A sampled SERP, not a rank tracker. No sitelinks, knowledge panels, map results or Canadian results. Figures marked "search summary" were not seen on the source page.
Re-measure	curl `-sI` and `-s -D -` with a desktop Chrome user agent on the apex, /pricing, /about-us, a junk path, the www host and deep www paths, /product(.html) and an unknown blog slug. 14 Oct 2026, 22:29–22:31 UTC.	One request each, from one location.
Brand and design	Brand study from Otto's published pages and the asset pack; AI-assisted brand review (Astra) and AI-assisted design critique (DeepSeek R1), advisory, each point checked against source by the project team before accepting.	Reviewer rankings are opinion. The choice of direction belongs to Otto.

Needs from Otto

Verified statistics, each with its source

Clinic count (200+, 650+ or 800+), patient count (900K+), "$220M+ orders handled", "2,000+ orders routed daily", sales lift (32% or 38%), setup time (20 or 30 minutes), "5.0 from 2,400+ patient reviews", the ROI figures; each with source, cohort, period and "as of" date. Also the founding date and HQ city to publish.

Compliance facts

Hosting region and data residency; encryption at rest and in transit; whether a BAA is available for US clinics; PIPEDA and PHIPA posture; SOC 2 status; sub-processors; for Copilot, which AI provider, and supporting detail for the published statements that data is not *retained* and, separately, not *used for training*.

Logo and customer permissions

Which suppliers, EMRs, partners and clinics allow their logos; which clinics will do a named case study or testimonial with a photo.

Screenshots and hero video

High-resolution product screenshots (the largest today is 646 px wide), a hero video or loop if one is planned, clinic photography, team headshots at full resolution.

Legal text

A current privacy policy (today's says "Last modified: May 27, 2022"), terms, the legal entity's registered address for /privacy and /terms, and approval of any security-page wording.

Scheduler and HubSpot IDs

A team demo scheduler to replace the personal meeting link, the HubSpot portal and form IDs, and which tracking tags must stay (GTM, ads pixel, chat).

Profiles

Access to LinkedIn, Facebook, Instagram, Crunchbase and Wellfound to align the facts; whether Otto has in-person customer contact that makes it eligible for a Google Business Profile, and whether one exists; owners for new G2 and Capterra profiles.

curl re-measure

14 Oct 2026, 22:29:40–22:30:41 UTC, user agent "Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/141.0.0.0 Safari/537.36".

Prepared for Otto Optical Systems Inc., October 2026. This report contains no customer names, testimonials or statistics beyond those Otto has published or that we measured, and each is attributed to its source.

APPENDIX

Evidence index

Source lines cite these items as [E1]–[E14].

#	ITEM	CONTENTS
E1	Audit findings log	Numbered findings (SEO-, PERF-, MOB-, A11Y-, CONT-, TRUST-) with evidence and fixes; 14 Oct 2026
E2	Lighthouse 12.8.2 audit run	Per-run scores and metrics, plus the run command; 14 Oct 2026, 19:35–19:38 UTC
E3	Headless-Chrome crawl	27 URLs × desktop and mobile: titles, meta, canonical, OG, headings, requests; sitemap copy; 14 Oct 2026
E4	Server HTML captures	curl, before JavaScript, per page and one blog post; 14 Oct 2026
E5	Rendered page text	Visible text per page after rendering, 15 pages; 14 Oct 2026
E6	Re-check findings	curl re-check of the audit's claims, 35 URLs, and the re-run summary; 14 Oct 2026
E7	Lighthouse 12.2.1 re-run	Otto pages and 4 competitor home pages; 14 Oct 2026, 22:28–22:37 UTC
E8	curl re-measure	Status codes and headers listed in 2.5–2.6; 14 Oct 2026, 22:29–22:31 UTC
E9	Search presence sample	4 brand and 8 category queries (US), profiles, press, competitor pages; 14 Oct 2026
E10	Brand study	Essence, attributes, voice and buyer, from Otto's published pages; 14 Oct 2026
E11	AI-assisted brand review (Astra)	Advisory; each point checked against source by the project team; 14 Oct 2026
E12	AI-assisted design critique (DeepSeek R1)	Advisory; each point checked against prototype source; 14 Oct 2026
E13	Design directions	Direction specs, prototypes and 1440 px screenshots; 14 Oct 2026
E14	Design brief	Colour tokens and measured contrast ratios

Evidence items are held by the project team and available to Otto on request.
